Abstract not available for JP2002504172T

Abstract of corresponding document: **WO9856839**

A method of preparing generally amorphous copolymers of ethylene and at least one norbornene (NB)-type comonomer. This method comprises polymerizing said monomers in a diluent or in bulk in the presence of a cationic palladium catalyst resulting from reacting a chelating ligand with a palladium (II) compound. Specific copolymers of ethylene and substituted norbornene-type monomers are also claimed.
